

Building Brampton's Second Hospital

Working with the community, for the community

Osler partners with various local organizations to connect patients to the services that can support them on their health care journey. Providing quality care is a true community effort.

What the new Peel Memorial Hospital means to the community

When combined with the existing services already operating at the Peel Memorial site, the new Peel Memorial Hospital will offer additional inpatient beds, a 24/7 emergency department, as well as new and enhanced outpatient clinics and services for this growing community.

Architectural renderings provided by Bird Design-Build Construction Inc. and Cannon Design Ltd., subject to change as design and planning progresses.

Building Brampton's Second Hospital

Looking Ahead

Osler is transforming Peel Memorial into **Brampton's new hospital** that will include a new multi-storey tower for inpatient beds, expanded outpatient clinics, and a 24/7 emergency department. **Once complete, the new Peel Memorial will:**

- Deliver increased access to 24/7 emergency services.
- Provide much-needed specialized inpatient and outpatient care to prepare patients to safely return home following hospitalization.
- Expand and enhance outpatient clinics and services that help patients to maintain and manage their health conditions.
- Improve access to inpatient beds across Osler's network of hospitals.

Local Share and William Osler Health System Foundation

Community support is critical to ensure our hospitals can continue to meet current and future health care needs.

William Osler Health System Foundation (Osler Foundation) seeks to create a healthier community through giving by inspiring its communities to invest in exceptional health care close to home.

In Ontario, communities are responsible for all equipment costs that a hospital incurs — this is called the “Local Share”. Osler continues to work with its municipal partners, Osler Foundation, and the community towards reaching local share goals for expanded clinical programs, services and medical technology.
